IBCS- certified

Make your business communication clearer and more comprehensible with IBCS.

From figures to pictures

Depict your figures using uniform visual imagery that everybody understands.

With a single click

Create your management reports and presentations simply by pressing a button.

Planning meets reporting

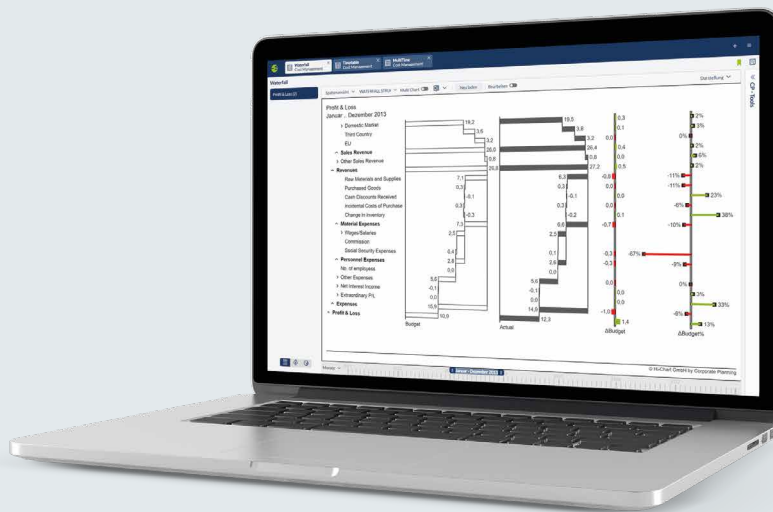

Our software structures your data and automatically applies the IBCS standards.

Standards for the right decisions

With reports prepared automatically according to the International Business Communication Standards (IBCS), you will establish standardised business communication with clear and comprehensible messages. Visualisations such as diagrams, tables and various charts enable your report users to interpret your data quickly and correctly, regardless of department, company or country. An IBCS-compliant reporting system creates transparency and provides the basis for successful business management.

Establish IBCS throughout your company

With our IBCS-certified solution, you will automatically be introducing the tried and tested notation system of the International Business Communication Standards in your company. Since, by using our software, you have already created the underlying data set, you can benefit from our new IBCS reporting tool straight away without any imports or data processing beforehand. Depending on the facts to be displayed, your chosen data and their structure, the right IBCS charts are suggested automatically.

Security and flexibility

Our new reporting system is fully integrated into your Corporate Planning software and thus provides you with the convenience that you, as a user, have already come to know. The integration into our rights management system, with its private-public concept, can be taken for granted, as can the variety of methods for distributing customised reports to different user groups. In our extensive library, you will find a wide range of templates on which to base your IBCS visualisations.

Reporting excellence

A single click will take you from the table reports in the Corporate Planner Web Client to an IBCS-compliant chart. You are always offered the charts that are best suited to the business content you wish to depict. Our familiar reporting functions are supplemented with attractive new chart types, such as waterfall charts and multi-chart displays. Comments can be added to values and variances for effective communication. This enables you to raise your reporting to a whole new level.

Advantages at a glance:

- IBCS-certified solution for a uniform notation system
- dynamic reporting with a single click
- data integrations to all common back-office systems
- fully scalable – can be used by small businesses and major corporations alike
- fully integrated in Corporate Planner 6.0
